

## EDUCATION

---

### National Institute of Technology, Kurukshetra

Bachelor of Technology in Computer Engineering

Kurukshetra, India

July 2017 – June 2021

## PUBLICATIONS

---

- *PC2L: PCA Continual Learning*  
Sima Behpour, Pooya Behpour, **Aman Goyal**, Richard Kang, Min Xu.  
Under Review at Top Tier Conference (Level: A1)
- *Detecting, Tracking and Counting Motorcycle Rider Traffic Violations on Unconstrained Roads*  
**Aman Goyal\***, Dev Agarwal\*, Anbumani Subramanian, C. V. Jawahar, Ravi Kiran, Rohit Saluja.  
Accepted in CVPR Workshop (UG2+ challenge)  
*\*indicates equal contribution*
- *Multimodal Emotion Recognition in Polish*.  
Kritika Rupaulhia, **Aman Goyal**, Aman Saini, Akshay Shukla, Sridhar Swaminathan.  
Published in IEEE International Conference on Multimedia Big Data (BigMM), 2020, New Delhi, India

## RESEARCH EXPERIENCE

---

### Xulab, Carnegie Mellon University

Jun 2021 – Nov 2021

Research Intern

Pittsburgh, USA

- Worked under the guidance of [Prof. Min Xu](#) and [Dr. Sima Behpour](#) on projects based on continual learning.
- Formulated and implemented a novel regularization based approach for continual learning which uses principal vectors to reconstruct the orthogonal projection matrix.
- This technique extracts only the essential gradient directions, which enhances learning as well as reduces inference.
- Implemented several state-of-the-art methods such as *Dynamically Expandable Networks*, *Orthogonal Weight Modification* and *Layerwise Optimization by Gradient Decomposition* across various datasets and environments .
- **Our work is currently under review at a top tier conference (level: A1).**

### Optimization and Trustworthy ML Group, Michigan State University

Sept 2021 – Feb 2022

Research Intern

East Lansing, USA

- Worked with [Prof. Sijia Liu](#) on compression of object detection and tracking models for autonomous vehicles.
- Implemented a lightweight detection and tracking backbone for integration with state-of-the-art method *QDTrack*.
- Achieved a 30% increase in accuracy and a 60-fold reduction in size as compared to the *QDTrack* model variants with *Resnet-50* and *Resnet-101* backbones. All models were trained on *BDD100K Detection* dataset.
- Developed a lightweight backbone using feature-based knowledge distillation technique with *Resnet-50* as teacher network. The knowledge transfer took place on *BDD100K Detection* dataset.

### Centre for Visual Information Technology, IIT Hyderabad

Feb 2021 – Sept 2021

Applied Research Fellow, Mobility Group

Hyderabad, India

- Worked under the guidance of [Prof. Anbumani Subramanian](#), [Prof. Ravi Kiran](#) and [Prof. C. V. Jawahar](#) on a novel solution to detect helmet and triple riding violations on unconstrained roads.
- Designed and implemented a pre-processing pipeline for the [Indian Driving Dataset](#). Additionally, I fixed a bug in the IDD dataset and contributed the codebase of the pipeline's various components, due to which I was provided the access to upload it to [IDD github repository](#).
- Developed a helmet violation detection solution intended to be used for road surveillance by the patrolling vehicles. It is based on *YOLOv4* model and achieves an mAP of 87%.
- Proposed a novel solution to detect and track triple riding violations using a trapezium regressor. For regressing the trapezium, the center and various offset coordinates were taken into account. The trapezium shaped bounding boxes were constructed over the rider-motorcycle instances, ensuring minimal overlapping. An IoU based counting algorithm was used for counting riders in the bounding box. We achieved 85% precision on a diversified test set.
- **Our work was accepted at CVPR Workshop (UG2+ challenge).**
- **A patent is also being filed for our novel trapezium bounding box technique.**

## Bennett University

Research Intern

May 2019 – Jun 2019

New Delhi, India

- Worked under the guidance of [Dr. Sridhar Swaminathan](#) on a multimodal human emotion recognition system.
- Developed emotion recognition solution through *LSTM* based classifier for body language, facial landmark detection using *OpenCV* library and *Librosa* library for audio modality. Additionally, deployed the model as an Android app for real-time emotion recognition. It achieved an accuracy of 95%.
- **Our work** was accepted and published in **IEEE BigMM 2020**.

## OTHER EXPERIENCE

---

### Nayan Technologies

Jan 2020 – Aug 2020

Deep Learning and Computer Vision Intern

New Delhi, India

- Developed and deployed a cost efficient real-time traffic light recognition solution which reduced the organization's expenditure on data annotation by 2.5 times.
- Worked on several tasks, including vehicle pose estimation, vehicle-camera distance estimation, and 2d-map vehicle trajectory estimation, all of which contributed to the development of the ADAS-based project's proof-of-concept, which was **patented** and **deployed** by **Dubai police at driving test yards throughout the UAE**.
- Spearheaded and developed several multiple deep learning projects and pipelines such as yard segmentation, lane occlusion recognition, overloaded vehicle recognition and others.

### Omdena

May 2020 – Jun 2020

Machine Learning Engineer

Remote

- Led a team of 10 collaborators for analysis and visualization of data gathered from Google trends for various domestic violence related terms on 10 Indian languages.
- **Successful in influencing the Ministry of Affairs to prioritize domestic violence and issue guidelines** due to the [various insights](#) gathered by the team, which were representative of various socioeconomic classes.

### NIT Kurukshetra

Aug 2020 – Dec 2020

Teaching Assistant

Kurukshetra, India

- Taught several machine learning concepts to 240 students during the semester as part of the course content. Also conducted various lab sessions and prepared it's assignments.

## PROJECTS

---

### Intrusion Detection in Low Light Scenarios | Computer Vision

- Developed a video surveillance based solution for low light scenarios as a capstone project. Low-light images were processed using stacking and averaging techniques, detection of intruders and their firearms using *YOLOv4* based model, *HRNet* for intruder pose estimation, and the *Viola-Jones* algorithm for intruder face recognition.

### Vehicle Parking Occupancy Detection | Computer Vision

- Proposed a parking occupancy status detection solution using *YOLOv3* model, homography estimation and *Point Polygon Test*. Also wrote a detailed [blog](#) on it .

### Deep Learning based COVID-19 classifier | Deep Learning

- Developed an easily deployable COVID-19 classifier which performs binary classification on X-ray images. Achieved an accuracy of 99% on the *MobileNet* model with a training set of just 50 images.

### Image Denoising with Autoencoders | Deep Learning

- Performed image denoising over *Olivetti Faces Dataset* using *Convolutional Autoencoders*.

### QuickDraw - Image Recognition | Deep Learning

- Implemented a *CNN* based image recognition tool which classifies images across 15 categories. It was inspired by Google's Quick Draw.

### Sujhav - Faculty Feedback App | Mobile App Development

- Developed and deployed a *Flutter* based Android app with *Firebase* as backend. It's use was mandated by college authorities and it aims to provide an open and transparent feedback platform for all students in the college.

## TECHNICAL SKILLS

---

**Languages:** Python, C++, C, Java, Bash

**Frameworks and Libraries:** Tensorflow, Pytorch, Keras, OpenCV, NumPy, Scikit-Learn, Android Studio

**Tools:** Git, GCP, Docker, MySQL,  $\text{\LaTeX}$ , HTML

## RELEVANT COURSEWORK

---

**Artificial Intelligence:** Deep Learning, Image Processing, Soft Computing, Automata Theory

**Systems:** Digital System Design, Database Systems, Computer Networks, Operating Systems, Distributed Computing

**Algorithms:** Advanced Data Structures, C Programming, Principles of Programming Languages

**Mathematics:** Differential Calculus and Equations, Integral Calculus and Difference Equations, Discrete Mathematics

## ACHIEVEMENTS

---

- **OpenCV AI Competition 2021:** Spearheaded team which was shortlisted as **Finalists** among **1600 applicant teams across the world** for the proposing a visually impaired assistance solution.
- **EYRC-2019:** Led college team to the semi-finals in Eyantra 2019 competition. The project was based on application of drones in rescue and search operations.
- **Google AI Explore ML Program:** Selected as **Google AI Explore ML Facilitator** among **10k+ applicants across India**.
- **Hackshetra 2019:** Finished among **top 8 teams** from a total of 50 teams. Inspired by the happenings around various universities in India, including mine, the proposed solution was an *LSTM* based **therapeutic AI chatbot** mobile application which could converse and make the depressed users feel better.
- **Bennett University Hackathon:** Finished among **top 4 teams** from a total of 52 teams for our multimodal emotion recognition project at Bennett University.

## LEADERSHIP AND VOLUNTEERING

---

- **Google AI Explore ML Program:** Successfully conducted and taught in **10 Deep Learning sessions**. These were attended by **200+ students from various backgrounds** across the university.
- **Computer Vision Webinars:** Tutored 50+ students in various webinars held during the pandemic's initial lockdown phase on deep learning concepts such as *LSTM*, *Autoencoders*, and *Image Captioning*.
- **KAIR:** Founded the first ever AI research club of the institute - Kurukshetra AI Research Club.
- **Innovation Club:** Founding member of NIT Kurukshetra's Official Innovation Club.
